

Mukil Rajeev

Senior Software Engineer

+1 512-550-0081 | mukilr@gmail.com | Austin, TX

PROFILE

Senior Software Engineer with 14+ years of experience building scalable, high-performance applications and distributed systems. Proficient in Python, Java, Go, TypeScript, PostgreSQL, Kafka, AWS, and Azure, with extensive experience designing RESTful APIs, cloud-native architectures, and backend platforms.

Hands-on experience building and integrating Generative AI and agentic AI solutions using OpenAI, Codex, Claude, Amazon Bedrock, Retrieval-Augmented Generation (RAG), and Model Context Protocol (MCP). Experienced in developing AI agents, connecting LLMs with enterprise tools and services, and using AI-assisted engineering workflows to accelerate development, troubleshooting, automation, and operational tasks.

Strong background in CI/CD, Docker, Terraform, GitHub Actions, distributed systems, authentication frameworks, performance optimization, and application security. Proven ability to lead end-to-end engineering initiatives, develop proof-of-concepts, collaborate across teams, and improve system scalability, reliability, security, and developer productivity.

EXPERIENCE

Oracle - Individual Contributor - Lvl 3

JUNE 2025 - Present

- Part of the Oracle Cloud Infrastructure (OCI) Multicloud engineering team supporting Oracle Database@Azure and integrations between Oracle Cloud and Microsoft Azure.
- Worked with OCI backend resource providers and cloud infrastructure services supporting highly available database platforms.
- Developed automated functionality to auto-close unused resources in the Azure portal thus saving upwards of \$200,000 annually.
- Created 10+ custom AI skills which use AI agents and AI-assisted development workflows to accelerate engineering, code analysis, debugging, troubleshooting, and automation
- Hands-on experience with OpenAI Codex AI-assisted log analysis and RCA identification which resulted in on-call ticket resolution to be 80% faster.
- Worked with Model Context Protocol (MCP) concepts and integrations to enable AI agents to securely interact with engineering tools, services, and contextual enterprise data.

Alation - Senior Software Engineer

AUGUST 2018 - MAY 2025

- Part of the development team for a leading product in the enterprise data catalog and data intelligence space.
- Developed highly scalable Python and Java applications designed to process and manage large volumes of enterprise data.
- Designed backend services and APIs supporting distributed, data-intensive applications.
- Re-engineered legacy Java applications to improve performance, scalability, maintainability, and integration with modern technologies.
- Designed and built an OAuth 2.0-based authentication and authorization framework from the ground up, enabling secure customer integrations that retained multiple enterprise clients

representing \$1M+ in annual recurring revenue.

- Worked on performance optimization, debugging, and production reliability across complex distributed systems.

Gartner - *Software Engineer II*

JULY 2014 - JULY 2018

- Recognized as a go-to engineer for Proof-of-Concept (POC) development and scaling successful prototypes into production-ready solutions.
- Designed and developed a reusable framework for integrating a product under development with other internal Gartner platforms.
- Built a framework for setting up, managing, scheduling, and deploying tasks across multi-node environments.
- Contributed to architecture, backend development, troubleshooting, automation, and performance improvements across multiple applications.
- Received the "Most Productive Team Member" award in 2016.

Cognizant - *Programmer Analyst*

AUGUST 2010 - JULY 2012

- Developed strong functional and technical expertise across two major client-facing enterprise applications.
- Became a Subject Matter Expert (SME) for one of the applications, supporting development, issue analysis, and production troubleshooting.
- Received the "Best Newcomer" award in 2011.

SKILLS

- Programming: Python, Java, GoLang, JavaScript, TypeScript, Shell Scripting
- Frameworks: Django, Gin, GORM, REST APIs, gRPC, Protocol Buffers, React, Angular
- Generative AI & Agentic AI: OpenAI, Codex, Claude, Amazon Bedrock, AI Agents, Agentic AI, Model Context Protocol (MCP), Retrieval-Augmented Generation (RAG), LLM Integration, AI-assisted Software Development
- Databases & Data Stores: PostgreSQL, SQL Server, Redis, MongoDB, Cassandra
- Cloud: AWS, Microsoft Azure, Oracle Cloud Infrastructure (OCI)
- DevOps / Infrastructure: Docker, GitHub Actions, Terraform, CI/CD
- Testing: Python UnitTest, Model Mommy, JUnit
- Performance & Diagnostics: Java Flight Recorder (JFR), HProf Analysis

ACCOLADES

- Best Newcomer — 2011
- Most Productive Team Member — 2016
- Consistently ranked in the first tier for performance appraisals
- Received accolades in multiple Hackathons

EDUCATION

Master of Technology - *Cyber Security* - **Amrita University**

AUGUST 2012 - JULY 2014

Bachelor of Technology - *Information Technology* - **Amrita University**

JULY 2006 - JULY 2010
